

# Clinical Case Study #1

Ms Jones a 45 year old Black female presents to the clinic 3 months pregnant with a diagnosis of HIV during her prenatal evaluation. Both the pregnancy and HIV diagnosis was a surprise to Ms Jones.

Ms Jones has a MBA and owns a business consultant company.

She is divorced and has a son age 20 and a daughter age 17.

She admits to 2-3 sexual partners over the past year. She admits to not practicing safe sex with sexual partners and non-monogamous sexual activity including oral, vaginal & anal sex.

Her past medical history is not significant for STI or co-morbidities.
