

Case 1

- A 31 yo Latina female was diagnosed HIV+ 4 mo ago. She initially presented with a complaint of a rash on her vagina x 3 days which was treated as genital herpes and her Oraquick was positive. She returned 1 wk later for her confirmatory results and has missed 3 FU appointments. She is a single mother of 2 and has a job as a store clerk. She is in a committed relationship. She always promises to keep her appointment but doesn't show.
- Discuss linkage to care strategies for this patient.
