

# Case 2

- A 57 yo AA man is accompanied by his 28 yo daughter for his FU visit. He was dx HIV+ 9 mo ago. His most recent CD<sub>4</sub> count was 389 so last visit (he has missed the following 2 visits) you discussed starting him on ARV' s. Today he smells of ETOH as he has on subsequent visits. He insists that he does not drink "that much" and states he has cut back after you questioned him about his drinking last visit. His daughter has remained quiet.
- How do you proceed?
